

## LOOK Cycle unveils new Keo Grip cleats, enhancing safety and durability in the iconic Keo range.

With three float options and precision adjustments, the new cleats integrate perfectly into the **LOOK Keo** ecosystem.

**20 January, 2026 - Nevers, France**

**LOOK Cycle** has introduced its new **Keo Grip** cleats, extending the legacy of the **Keo** cleat range. Building on the Keo standard, which has been the benchmark for race-proven reliability and power transfer since 2004, the new **Keo Grip** offers significant improvements in both walk safety and durability.

Engineered for maximum efficiency, every watt is translated into forward motion. The **Keo Grip** cleats feature durable compounds for a longer lifespan and an optimised contact patch that ensures rock-solid foot stability.

## Reinforced Fore–Aft Grip

The **Keo Grip** integrates **LOOK**'s best technologies to enhance both the cycling and walking experience. The enlarged fore–aft grip zones have been redesigned and widened by a total of 2 cm, featuring optimised pads that significantly improve stability, limit slipping, and secure every step when off the bike. The low-friction **Silent Float** technology, integrated at the rear of the cleat, dramatically reduces creaking noises, limits abrasion, and ensures a smoother, quieter interface with the pedal blade.

## Perfect Setup and Position

Riders can dial in their position precisely with three float options to suit their needs: **0°** for a fixed, ultra-precise foot hold, **4.5°** for the best balance between stability and comfort, or **9°** for maximum freedom of movement and reduced stress on the knees.

The **Keo Grip** cleats are also fully integrated into the **LOOK** fit ecosystem, allowing for millimetric precision adjustments through combinations of cleat spacer thicknesses, sole curvature-compensation shims, and 56 mm pedal spindles.

## Pricing and Availability

The new **Keo Grip** cleats are available from January 2026 and are priced at **20€ / \$28 / £19.99**.
